

ICT TRAINING

Training Offered

Basic Linux (2 Days) (RM900)

Introduction to linux and how easy to setup, configure and use linux

[What's Inside]

- Linux Installation
- Simple GUI configuration
- Simple network configuration
- Simple application usage

Intermediate Linux (3 Days) (RM1200)

More advanced linux technique, tools and configuration by using linux.

[What's Inside]

- Learn how to file sharing (samba)
- Learn how to use firewall rules
- Learn how to setup log and read log
- Learn how to disable unnecessary ports

Linux Security (4 Days) (RM2000)

Tools, technique, tips and howto for securing linux as a workstation or server

[What's Inside]

- Learn how to read process in linux.
- Learn how to check users.
- Learn how to do patching .
- Learn how to use system rules and policy
- Learn how to use restriction for user and groups
- Learn how to use 3rd parties utilities

Basic TCP/IP (2 Days) (RM 1000)

The fundamentals of networking that we need to know. From beginner to intermediate, learn how tcp/ip and network relate.

[What's Inside]

- Learn what is network and TCP/IP itself
- Learn what is protocol
- Learn LAN architecture

Basic Penetration Testing (3 Days) (RM2000)

Introduction in learning to evaluate current system and network in the working environment.

[What's Inside]

- Learn how to gather information
- Learn how to scan the network
- Learn how to use vulnerability scanner
- Learn how to find the hole
- Learn how to do simple patching

Basic ICT Security (3 Days) (RM2000)

We are using internet more and more in our daily life today either we notice it or not. With that in mind, we need to know how at least the basic of ICT Security

[What's Inside]

- Know what is ICT Security
- Know what is ICT threats
- Know what type of attacks in the wild
- Know how to secure yourself

Basic Wireless Security (2 Days) (RM1300)

By using wireless, we exposed ourselves to an unknown intruder. We need to know how to secure our wireless network from being exposed to outsider.

[What's Inside]

- Learn what is wireless
- Learn what is wireless security
- Learn to deploy simple wireless with security
- Learn to using wireless tools

Linux, Windows, Apache, Mysql and Php (5 Days) (RM2000)

Using the most common web server and the most common database by using the most popular website code. We are going to learn how to use it all.

[What's Inside]

- Learn to install and configure apache in linux and windows
- Learn to install and configure Mysql in linux and windows
- Learn to install and configure php in linux and windows
- Learn to secure all the installation
- Learn to deploy the configuration in real environment

Linux And Windows Hardening (3 Days) (RM2000)

Server and workstation need to be harden for maximum security. Learn how.

[What's Inside]

- Learn how to harden windows and linux server
- Learn what need to be close and need to be patch
- Learn how to check for Trojan and root-kit

Log Analysis (3 Days) (RM2000)

Every server has its own log. Webservers are not excluded. This training will give you the know-how for log analysis.

[What's Inside]

Learn how to set the log
Learn how to extract the log from the server
Learn how to read the log
Learn what needs to be checked in the log
Learn tools that are useful in log analysis

Basic Web Development (PHP & MYSQL) (4 Days) (RM1500)

Using programming language such as PHP and database such as MYSQL, we can create websites from simple websites until advanced websites such as professional webmasters.

[What's Inside]

Learn how to configure simple webserver
Learn how to begin programming using PHP
Learn how to integrate MySQL with PHP
Learn how to create your own 1st website

***All training is provided with:**

- **Training module**
- **Training tools**
- **Certification**
- **4 meals a day**
